# 1 New chart types

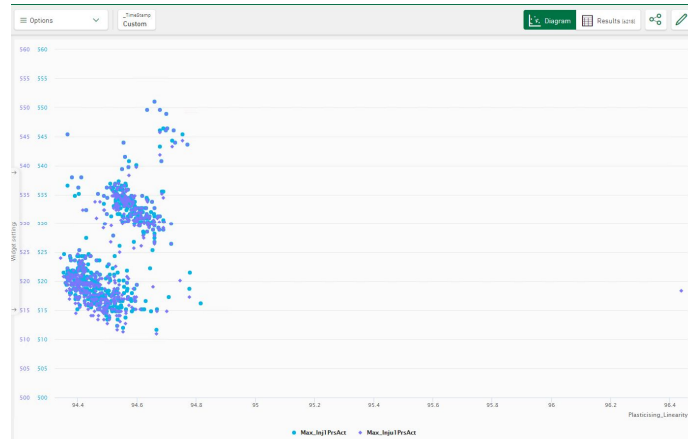

ibaDaVIS v1.1.0 is providing an *XY chart* to display the relation or a *Histogram* to display the deviation of values from signals out of dat files or KIP values the *ibaFile table*.

## 1.1 XY chart

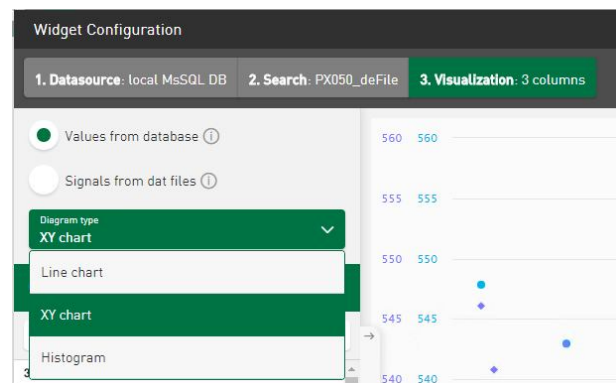

XY chart at the Dashboard

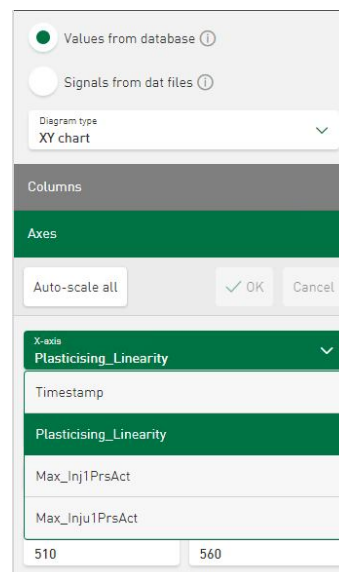

XY chart at the details view

The widget configuration assistant provides the option to switch the chart from a usual time based *Line chart* to an *XY chart*.

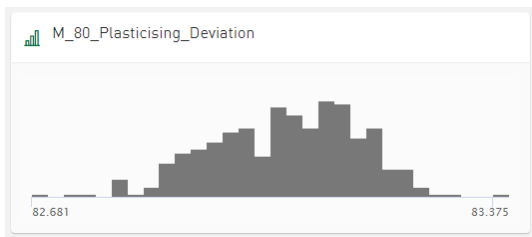

The x axis is the time stamp by default. At the axis configuration it's possible to select another series for the x-axis. Then relations between the signals or values from the database can be displayed

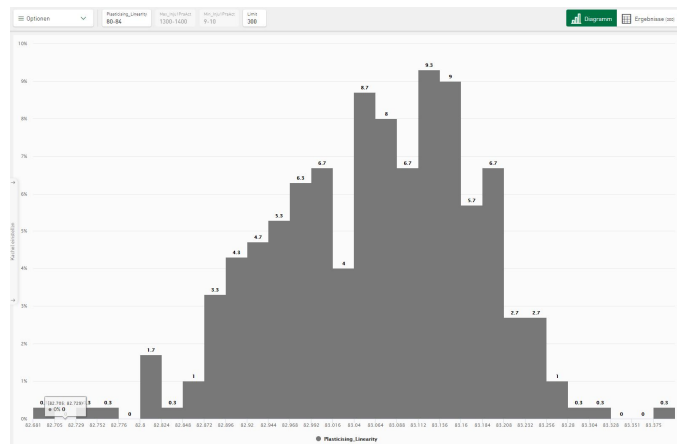

## 1.2 Histogram

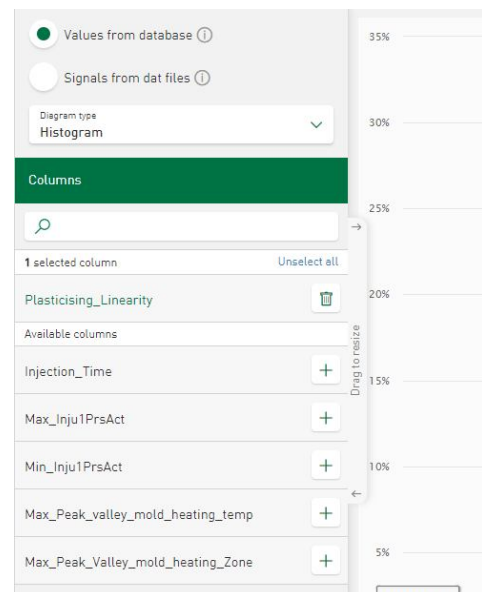

Histogram at the Dashboard

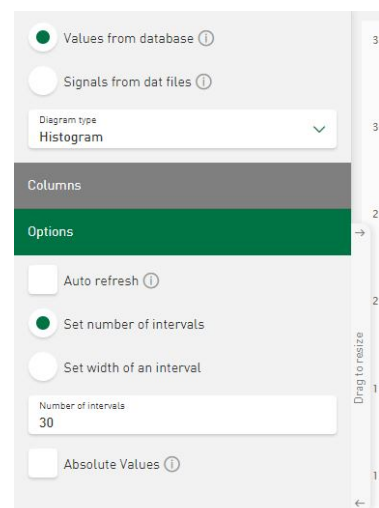

Histogram at the details view

The widget configuration assistant provides the option to switch the chart from a usual time based *Line chart* to a *Histogram*. The *Histogram* supports the display of the deviation for one signal or column.

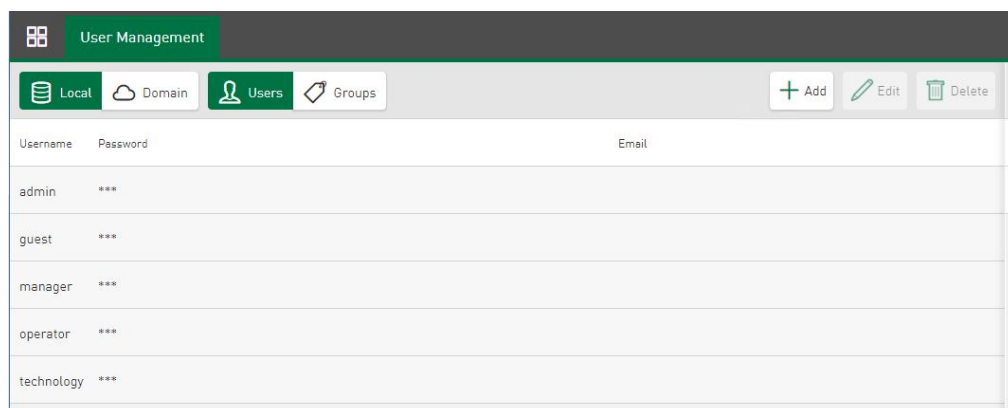

The user can select under the option whether his like to split the value range into a certain number of intervals or preset the value range for the width of an interval.

## 2 User management with Active Directory

ibaDaVIS supports next to the local management for login and password the registration of user groups or users from the active directory.

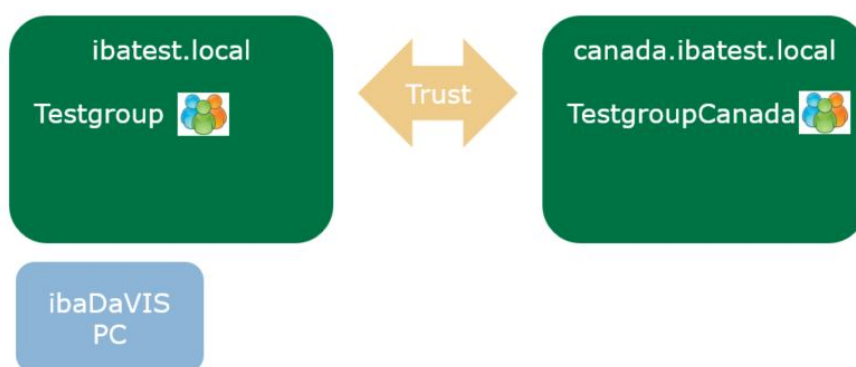

Local Users / local Groups:

Login and password is managed by ibaDaVIS users with administrative rights. The login information can be used to login to ibaDaVIS only.

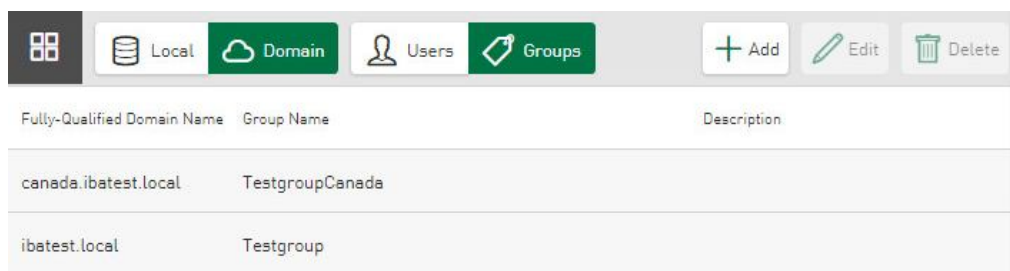

Domain Users / Domain Groups:

ibaDaVIS users with administrative rights register Domain Groups or Domain Users at ibaDaVIS user management. Up to then the login for registered Domain users or members of registered Domain Groups can be applied to login to ibaDaVIS also.

Example for the Domain user group registration

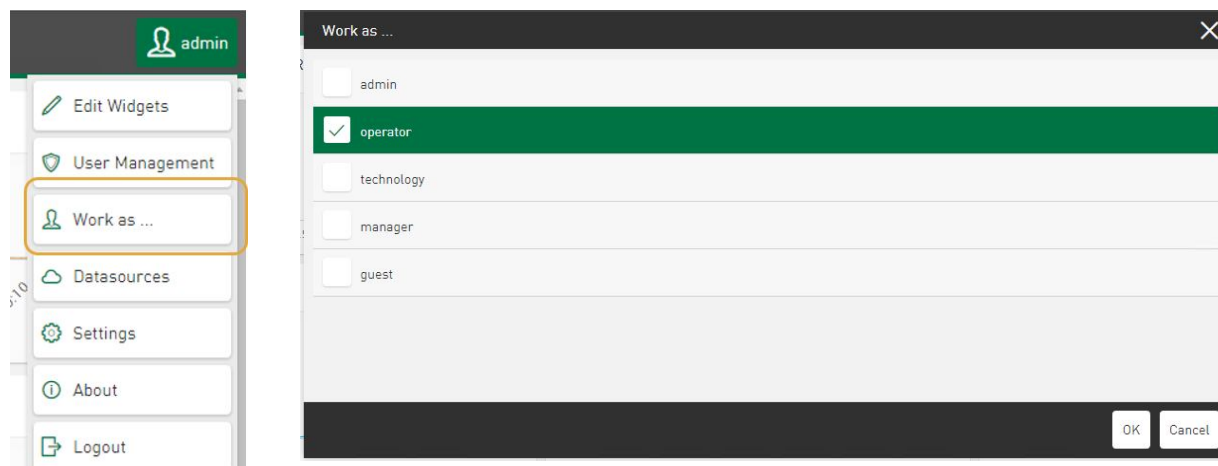

Registration of the Domain user groups in ibaDaVIS

## 3 Extended administrative tools

### 3.1 Work as ..

Users with administrative rights in ibaDaVIS have the privilege to work under another user account. They can use the *Work as..* function to see and edit the widgets of other users.

### 3.2 Copy and shift widgets on dash board

Switching the dashboard of ibaDaVIS into the edit mode offer the opportunity to copy the widgets.

Also it's possible to change the order of the widgets on the Dashboard. Using Drag and drop it's possible to put the widgets to another position on the dashboard.
